

New Addition Electra-GREEN Product Line

October 6, 2015 - Addition's Electra-GREEN technologies at FABTECH

Addition Manufacturing Technologies is launching a new all-electric end forming product line, *Electra-GREEN*, and will demonstrate two new machine models, the EG-50 RS Rotary Spin Machine and the EG-70 VTPN Vertical Trim Machine with Pre-Notch at FABTECH 2015. The EG-50 RS Rotary Spin Machine, designed for small diameter tubes up to 2", has been developed in response to customer demands for a more automated and more compact design. With custom tooling designs and simple tooling changeover, this model offers customers versatility and improved production efficiency for flaring, beading, squaring, and deburring. The EG-70 VTPN Vertical Trim Machine combines the proven dependability of the company's traditional tube trim machine with additional benefits such as reduced power usage and noise, no hydraulic fluid required, and a smaller machine footprint requiring less floor space.
